Dear Chris,

POWERCO

Testimonial

The purpose of this document is to comment on the project tasks completed for Powerco, as part of Powerco's project to enter backlogged network information in Powerco's GIS system. The work was undertaken by Aabsys and managed by We-do-IT(NZ)

This work entailed the updating of network information in Powerco's GIS system, by entering 5,395 work packs. The work packs presented a number of challenges, since they included historic data and information supplied within was often inconsistent and unclear.

The Aabsys team approached the task with diligence. They quickly established work routines and carried out the repeatable work very competently. The Aabsys team worked long hours and increased their resources in an extra effort to match the proposed schedule. They proved to have very good typing skills, which was reflected in the high accuracy of the data entry.

We found the Aabsys team very accepting of our feedback, always gracious, and looking to improve their performance.

In tracking and documenting their progress, the team proved to be trustworthy and correct.

The consistent throughput from the Aabsys team meant that the quality assurance staff at the Powerco end were constantly active and that the project's finish date could be forecast accurately. The project has completed successfully with the desired end result, which means that Powerco now has up-to-date information for its business units that rely on GIS data.

Yours faithfully

Denise Cadman
IS Services Manager
